About Us

Since its establishment in 2000, by developing itself, Aircraft has grown continually and become one of the most reliable brands of the heavy duty parts sector.

Aircraft is a well-known and well respected air suspension brand, with approximately 80% of products exported worldwide. Today, Aircraft brand air springs can be found in more than 80 countries worldwide.

The brand stands for closeness to its customers, constant innovation, on time deliveries, competitive pricing strategy and stability. Comprehensive product range satisfies the stringent requirements of its customers.

The quality and management system is certified to ISO 9001: 2015 and IATF 16949:2016.

Believing in 'investment will improve organizational abilities, raw material security and maneuverability'

Choice of both OE companies and reputable aftermarket shelves, Aircraft pursues long term and sustainable goals. It strives for market leadership with its quality products and focuses on continuous growth with its modern production facility.

Our convoluted and sleeve type air springs have strict design specifications of which our R&D department ensures quick execution of processes at very high quality.

Aircraft Air Springs are precisely engineered, designed, tested and manufactured according to strict parameters to provide reliable and cost-effective use in a wide variety of applications. Most common applications are in vehicle suspensions, but air springs can also be used to keep vibrating/rotating machinery from affecting other components.

Aircraft offers a variety of air spring types to meet your actuation or isolation needs. Our product range covers;

- Convoluted air springs providing superior performance in lifting applications and vibration absorption applications
- Sleeve type air springs are widely used as the major component in cabin suspension and driver seat suspension.

AIRCRAFT FACTORY IN GÖRÜKLE / BURSA

AIRCRAFT FACTORY IN NOSAB / BURSA

Convoluted Air Springs

Classified as single, double and triple; convoluted air springs increasingly replace pneumatic cylinders in the world industry. With higher course length, compactness, ease of usage and low maintenance costs, convoluted air springs offer the performance in lifting, compression, suspension and eliminating vibration both under vehicles and machines.

All convoluted air springs are available in a wide range of sizes, with the end retainer style required for your installation. Although the two-ply air spring is standard, many of our air springs are also available in four ply construction for use at higher pressures.

As well as aftermarket customers, Aircraft proudly provides high quality convoluted air springs to local OEM brands since year 2000.

The main technical characteristics of each rubber bellows are indicated in order to identify easily and quickly the best product to meet your specific requirements.

Sleeve Type Air Springs

Sleeve type air springs are typically used for truck & tractor cabin suspension, suspension of passenger vehicles and driver's seat suspension. These air springs can be used, depending on space availability, directly as an add-on to the vibration shock absorber or alternatively installed in parallel arrangement to it.

Please check page 101 for details about our sleeve type air spring range for cabin, passenger cars, light commercial vehicles and driver's seat suspension.

Sleeve Type Cabin Air Springs

Used in the truck and tractors' cabin as four point suspension, cabin air springs provide much more comfort in comparison to its precedes, steel springs. Combining traditional shock absorbers with air springs instead of coil springs, this hybrid solution to suspension significantly eliminates vibration.

Since 2000, Aircraft supplies cabin air springs and sole sleeves not only to the aftermarket but also to worldwide leading shock absorber manufacturers.

Sleeve Type Driver's Seat Air Springs

Driver's seat air springs provide a new breed of seat suspension, lowering fatigue and health risks frequently faced by drivers. Eliminates the vibration for the most important part of the truck, THE DRIVER, and keeps the seat at an adjustable height at all times.

Besides supplying the aftermarket, Aircraft also supplies leading global seat manufacturers.

Systematic Management

Usage of high quality rubber, cord fabric and materials combined with our deep know how in producing air springs, our experienced team, state of the art machinery and modern testing facilities ensure the continuous development and improvement of all product lines and confirm the innovative force of Aircraft. We are committed to continuous improvement and have established a Quality Management System which provides a framework for measuring and improving our performance. Our quality management system meets the high standards of ISO 9001:2015 and IATF 16949:2016.

A Culture Where Quality Comes First

Aircraft has always been customer driven and quality focused brand. At Aircraft, we foster a culture where quality objectives are given first priority throughout our organization. This has made our company a world-class manufacturer and well known brand for convoluted and sleeve type air springs. We strive to provide our customers with products and services which meet and even exceed their expectations.

AIRKRAFT

PRODUCT ID AND TRACEABILITY

BARCODE

Barcoding system provides AIRKRAFT products a maximum traceability down to the raw material. Via the barcode number on the label, it is possible to answer all questions regarding the product, until the final customer.
